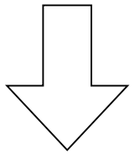
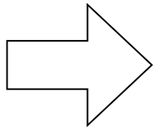
Conclusion

Find all patients born in or after 1970.



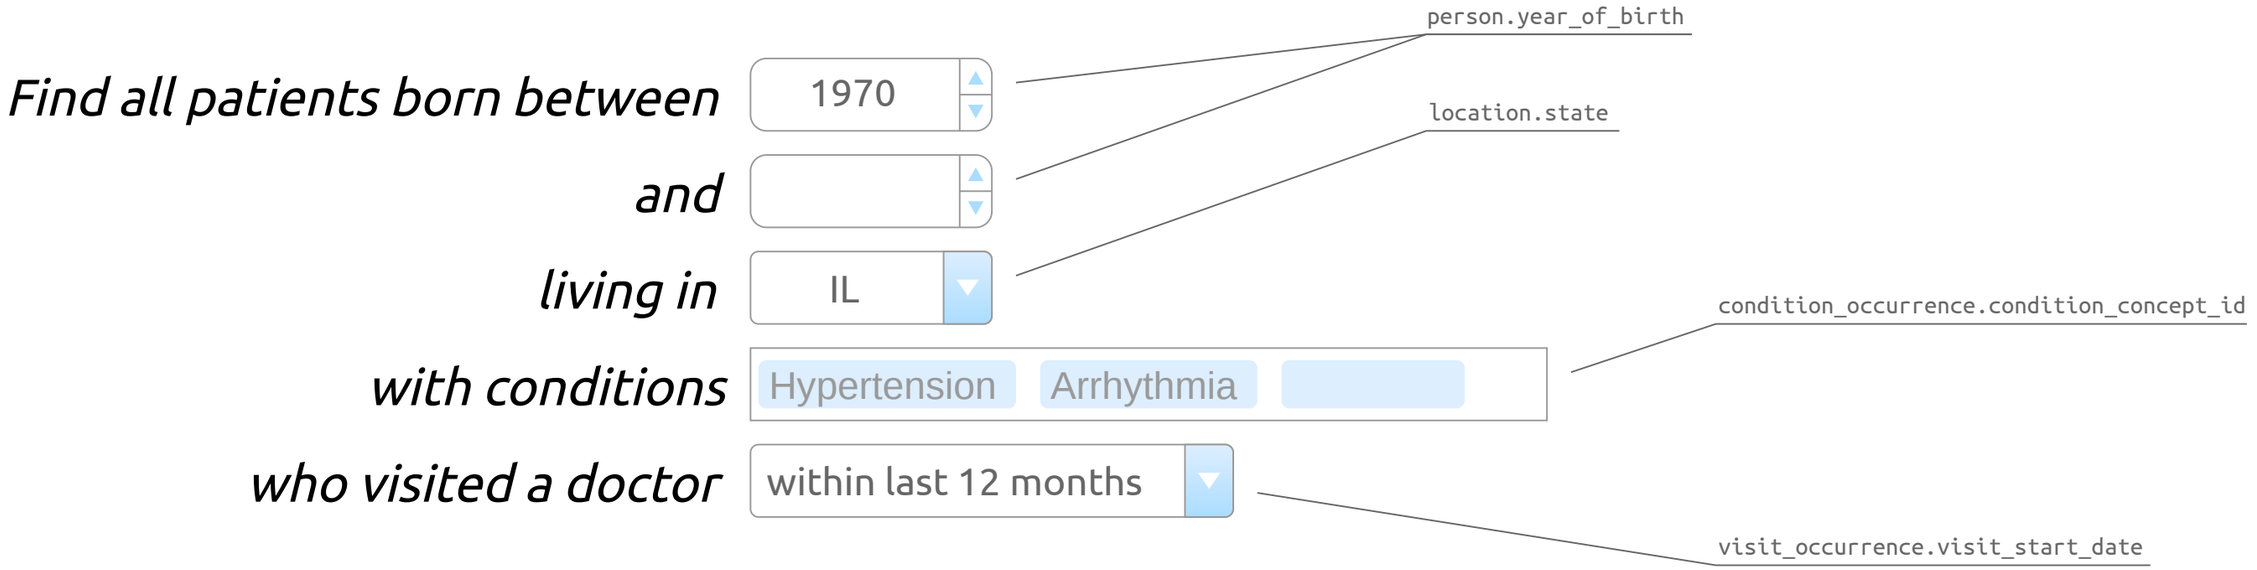
```
SELECT p.person_id
FROM person p
WHERE p.year_of_birth >= 1970
```



```
function find_patients(conn)
    sql = """
    SELECT p.person_id
    FROM person p
    WHERE p.year_of_birth >= 1970
    """
    DBInterface.execute(conn, sql)
end
```

Find all patients born between 1970 *and*

```
function find_patients(conn; start_year = nothing, end_year = nothing)
    sql = """
    SELECT p.person_id
    FROM person p
    """
    predicates = String[]
    if start_year !== nothing
        push!(predicates, "p.year_of_birth >= $start_year")
    end
    if end_year !== nothing
        push!(predicates, "p.year_of_birth <= $end_year")
    end
    if !isempty(predicates)
        sql *=  "\nWHERE " * join(predicates, " AND ")
    end
    DBInterface.execute(conn, sql)
end
```



```
function find_patients(conn; start_year = nothing,
                             end_year = nothing,
                             state = nothing,
                             condition_concepts = [],
                             latest_visit_threshold = nothing)

    sql = ???

    DBInterface.execute(conn, sql)
end
```
