*Find all patients born in or after 1970.*

```
function find_patients(conn)
  sql = """
  SELECT p.person_id
  FROM person p
  WHERE p.year_of_birth >= 1970
  """
  DBInterface.execute(conn, sql)
end
```

*Find all patients born between*

1970

*and*

```
function find_patients(conn; start_year = nothing, end_year = nothing)
  sql = ""
  SELECT p.person_id
  FROM person p
  ""
  conditions = String[]
  if start_year != nothing
    push!(conditions, "p.year_of_birth >= $start_year")
  end
  if end_year != nothing
    push!(conditions, "p.year_of_birth <= $end_year")
  end
  if !isempty(conditions)
    sql *= "\nWHERE " * join(conditions, " AND ")
  end
  DBInterface.execute(conn, sql)
end
```
